

# Backseat Bridge

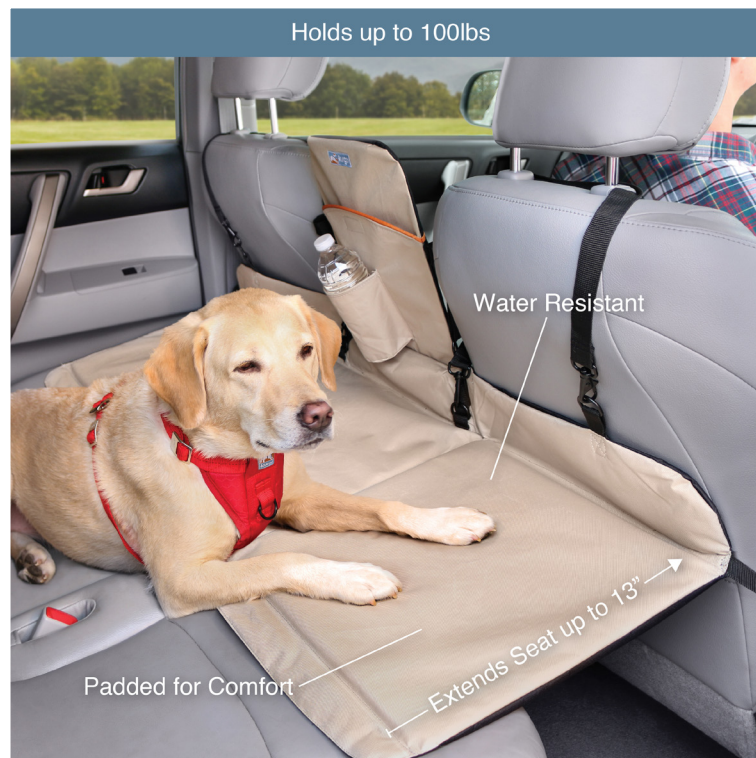

Dogs and humans have differing opinions on lots of things, but there's one thing they can certainly agree on: falling on the floor is not the best.

The Backseat Bridge does what it says—it bridges the gap between your back and front seats. Which means the gap (so perfect for human legs, but less suited to a dog's face) is magically transformed into more room for him to spread his paws. Put up the fold-down center barrier, and he's safe and contained to the backseat.
